LearningApps in science lessons

LearningApps.org is a Web 2.0 application, to support learning and teaching processes with interactive modules. They can be used directly in learning materials, but also for self-studying and for creative content production.

LearningApps include no specific framework or a specific learning scenario, so they are not suitable as complete lessons or tasks. Instead they must be embedded in an appropriate teaching scenario.

In our project we would like to show how to make these Apps and how to use them in teaching Sciences. We are going to talk about the collaborator teachers' community in Hungary, who help each other to include this gamified, ICT supported teaching method in their practice.

- Easily producible teaching blocks
- Multimedia content
- Automatic feedback for independent practice
- Free and ad-free, HTML5 for all devices
